

Please note that physical compatibilities may not be approved tank-mixes. The tests do not check for any adverse crop phytotoxicity or for the biological efficacy of the individual components when applied in a tank-mix. Bayer CropScience gives no warranty and accepts no liability in respect of physical compatibilities; therefore, use is at grower's own risk.

Helix may be applied in specified tank-mixtures. The matrix charts the recommended Herbicide, PGR and Fungicide compatibilities.

Please note that only tank mixtures selected from a single column and a single row are recommended, e.g. Helix + Swift SC + Eagle.

In exceptional circumstances where spraying is delayed in winter wheat, Helix may be mixed with 1 compatible BLW herbicide (NOT Atlantis WG, Hussar or fops) and 1 PGR from those shown as compatible below provided the mix is not excluded in any other tank-mix list. Multi-mixes may increase the risk of slight scorch. Particular care should be taken with Moddus mixes where more than 0.1 L/ha is used, although including Adjust may help to safen the mixture.

In Winter or Spring Barley, if spraying delays are unavoidable, Helix + Swift SC may be mixed with 1 compatible BLW herbicide and 1 PGR (NOT Moddus) provided the mix is not excluded by any other tank-mix list.

Helix + Cerone + Silvacur	Helix + Imtrex	Helix + Quell Flo + Barton + Human Extra	Helix + Quell Flo + mecoprop	Helix + Quell Flo + Triumph + Toil	Helix + Zulu

Tank-mix precautions

PGR tank mixtures

Helix + strobilurin may be applied, before crop GS32, in mixture with one of the following (dose/ha): -

Moddus 0.2L + chlormequat 1.25L (winter wheat)

Moddus 0.1L + chlormequat 1.25L (winter barley – light soils or malting crops)

Moddus 0.2L + chlormequat 1.25L (winter barley – Other soils and feed crops)

Before using any of the mixtures shown above, first check the manufacturer's latest recommendations for Moddus. DO NOT use Helix + strobilurin + Moddus + chlormequat on Spring Barley.

Adjuvants

In soft crops avoid the use of tank-mixtures with HBNs, Atlantis WG + biopower or Pacifica + biopower. In particular, tank mixtures with EC fungicide formulations as this may result in transitory adverse crop effects.

Cheetah Super, Grasp or Topik

Adjuvant oil recommended by the herbicide manufacturer may be added in mixes with Helix + strobilurin. Do NOT use any of these herbicides in mixes with Helix + strobilurin + Moddus + chlormequat

Trace Elements

These products are physically compatible only, there is no information on crop safety available

General Precautions

For any tank-mix it is important that the appropriate manufacturer's recommendations should be consulted and followed, and care taken to ensure that applications are made within the recommendations for each product. First disperse Helix in the spray tank (follow label 'Mixing' instructions), then add the other product(s), unless specified otherwise. All mixes should be sprayed immediately and agitated throughout until the spray tank is empty. The user should ensure that all products to be tank-mixed with Helix are approved for use on the crops which are to be sprayed. Always check individual product labels for any possible restrictions before making a tank-mix recommendation.
