

DK EXTREMUS

DK Extremus continues to be one of the strongest all-round winter OSR varieties available, with a combination of very high disease resistance, super fast autumn vigour, spring earliness and strong stem stiffness.

It also carries *Verticillium* tolerance, a stellar track record in independent replicated plot trials and DEKALB farmer strip trials.

VITAL STATISTICS

3 YEAR AVG. GROSS OUTPUT	5.09 t/ha
3 YEAR AVG. OIL CONTENT	46.0%
RESISTANCE TO LODGING	Excellent (8)
STEM CANCKER RESISTANCE	Excellent (8)
LIGHT LEAF SPOT RESISTANCE	Good (7)
TUYV RESISTANCE	-
POD SHATTER RESISTANCE	R

NIAB, OAT & Scottish Agronomy Replicated Trials Data
2022, 2023 & 2024 - 11 Trials

MAIN ATTRIBUTES

- Fully replicated trials show it performs at statistically the same level as today's most popular TuYV resistant hybrids with a three year average treated gross output of 5.09 t/ha from the previous 3 seasons.
- Rapid but not over-fast autumn development to get away from autumn challenges with the least risk of excessive pre-winter canopy growth.
- The earliest spring regrowth for the most reliable compensation for winter weather and pest damage.
- Good light leaf spot and stem canker resistance with *verticillium* tolerance and strong standing power for the greatest management flexibility.
- Original DEKALB pod shatter resistance, maximising combining flexibility while minimising seed losses in the run-up to and at harvest.

DK EXTREMUS

KEY TRAITS

VIGOROUS ESTABLISHMENT

Robust initial root and shoot growth for the most reliable and even establishment.

RAPID AUTUMN DEVELOPMENT

Faster-than-average development for the most rapid growth away from flea beetles and other autumn challenges.

DOUBLE PHOMA RESISTANCE

RLM7 supported by polygenic resistance for the most durable phoma/stem canker protection and greatest spraying economy and flexibility.

EARLY SPRING REGROWTH

The earliest start to regrowth after winter for the greatest tolerance of damage from flea beetle larvae and other spring challenges.

POD SHATTER RESISTANCE

Pioneering genetic resistance to pod shattering for the least seed shedding up to and at harvest and the greatest flexibility in harvest timing.

EARLY MATURITY

Earlier-than-average ripening for the most timely harvesting and least stressful harvest workload management.

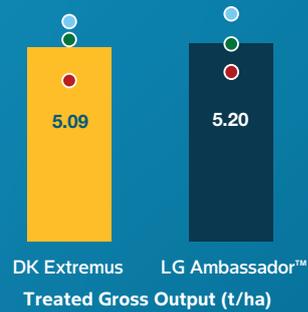

HIGH OIL

Higher-than-average oil content to maximise gross output for added market returns.

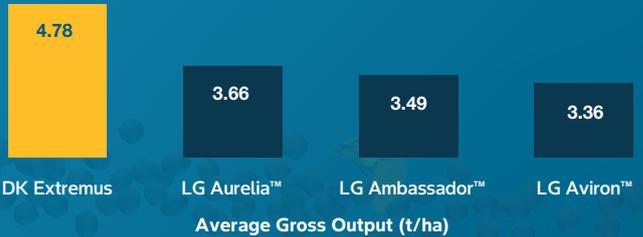

DK Extremus is one of the most suitable varieties for drilling early as well as in the main sowing window, and highly valued for its particular earliness and speed of spring development.

Performance in replicated UK plot trials 2022, 2023 & 2024 (11 trials)

■ Three Year Average ● 2022 Average ● 2023 Average ● 2024 Average

DK Extremus has the strong ability to perform under tough conditions, underlined by its gross output performance on the three most challenging replicated trial sites in the previous two seasons

2023 NIAB Cambridge & Sutton Scotney / 2024 NIAB Sutton Scotney

Performance in field-scale UK farm strip trials 2022, 2023 & 2024 (29 sites)
